## RESEARCH INTERESTS

---

My principal research interest lies in the microeconomic analysis of issues in development economics. I am particularly interested in the causes of poverty, food insecurity and undernutrition, and the design and evaluation of interventions that would reduce these. Much of my current research has focused on the determinants and consequences of human capital formation. This builds on my earlier work on modeling the processes of intra-household resource allocation and on labor markets. I have also had involvement in discussions surrounding aid flows, responses to the 2008 food price crisis and reforms to the global food security architecture such as the Food Aid Convention.

I am currently the leader of a five country study evaluating the impact of food, cash and voucher transfers being conducted for the World Food Program, the leader of the evaluation of Ethiopia's Food Security Programme and team member of an evaluation of South Africa's Child Support Grant. I was the leader of the recent evaluation of Brazil's *Bolsa Familia* cash transfer program and participated in the impact evaluation of *PROGRESA*. I have been heavily involved in primary data collection through living in a mud hut in western Kenya and a small town near Timbuktu Mali as well as developing longitudinal and cross-sectional household and community surveys in Cote d'Ivoire, Ethiopia, Guatemala, Kenya, Mali, Namibia, Niger and Zimbabwe. I have given more than 120 formal presentations of this work, as well as informal presentations in developed and developing countries to audiences including cabinet ministers, senior officials in various governments and donor agencies, village leaders and the media. My work has been cited in a number of media outlets including the Daily Telegraph (UK), *the Economist*, *Newsweek*, the New York Times, the Times of India, the Wall Street Journal and the Washington Post.
